

PRODUCT DATASHEET

OTDR LAUNCH CABLE FIBRE RING

OTDR Launch Cables are designed to be used in conjunction with an OTDR to measure the complete link loss of a fibre.

An OTDR launch cable, which connects the OTDR to the link-under-test, discloses the insertion loss and reflectance of the near-end connection.

A receive cable, which is connected to the far-end of the link, exposes the insertion loss and reflectance of the far-end connection.

Our OTDR launch cable fibre ring serves as both a launch cable and a receive cable.
